Daniel Fedorin

n Portland, OR

€ (000) 000 0000

Education

Master of Science, Oregon State University, Computer Science - Completed June 2022 • 4.0 GPA

Bachelor of Science, Oregon State University, Major: Computer Science | Minor: Mathematics - Completed June 2020 • 4.0 GPA

Skills

Programming Languages: C, C++, Haskell, Elm, Coq, Idris, Crystal, JavaScript, TypeScript, Kotlin, Java, Python, Nix, Haxe Languages: English (native), Russian (native), French (conversational, DELF B1 certification)

Additional Skills: Compiler design, formal verification, algorithms, low-level development.

Projects

bloglang \mathscr{D} — Compiler for a purely functional, lazily evaluated language explained in-depth on personal blog. maypop \mathscr{D} — Dependently typed functional programming language capable of formal proofs. pegasus \mathscr{D} — LALR parser generator currently supporting the C and Crystal languages. matrix-highlight \mathscr{D} — Tool for collaborative, decentralized, and federated web annotation based on the Matrix protocol.

Publications

Divya Bajaj, Martin Erwig, **Daniel Fedorin**: A Visual Notation for Succinct Program Traces (journal paper), COLA 2023
Divya Bajaj, Martin Erwig, **Daniel Fedorin**, Kai Gay: Adaptable Traces for Program Explanations, APLAS 2021
Divya Bajaj, Martin Erwig, **Daniel Fedorin**, Kai Gay: A Visual Notation for Succinct Program Traces, VL/HCC 2021
Jácome Cunha, Mihai Dan, Martin Erwig, **Daniel Fedorin**, Alex Grejuc: Explaining spreadsheets with spreadsheets (short paper).
GPCE 2018: 161-167

Work Experience

Programming Language Engineer, Chapel &

Hewlett Packard Enterprise | Summer 2022 - Present

- Added support for compile-time reflection, various language keywords, and full scope resolution to compiler written in C++.
- Designed and implemented a type-safe error reporting API, improving developer experience and compiler error messages.
- Enabled rapid prototyping of language tooling such as linters by developing Python bindings for compiler front-end.
- Supported community growth by designing, launching, and authoring articles for the Chapel language technical blog.
- Laid groundwork for compatibility with leading-edge supercomputers by implementing initial AMD GPU programming support using Clang and ROCm tooling.

Research and Teaching Assistant, Programming Language Theory

Oregon State University, Corvallis, OR | Spring 2018 - Summer 2022

- Formalized denotational and operational semantics of new explanation-oriented programming languages.
- Developed tooling in Haskell to interpret, verify, generate, and debug programming languages.
- Contributed to research papers published to the GPCE and VL/HCC.
- Proctored quizzes and exams for over 200 students.
- Aided students in implementing a final project in the form of a custom programming language.
- Suggested and organized independent review sessions attended by over 70 students, with 50% attendance growth between sessions.

Front-End Intern, Hydrogen &

Element.io | June 2021 - September 2021

- Spearheaded migration of codebase to TypeScript, improving documentation and discovering hidden bugs.
- Leveraged advanced type system features to precisely specify nontrivial program properties.
- Developed a mocking system to help specify and test corner cases in a distributed communication system.
- Independently implemented user-facing features including offline-first replies and sanitized HTML rendering.

Additional Experience

Technical Writer

Independent | Spring 2015 - Present

- Designed and published website currently live at danilafe.com.
- Authored blog posts on topics spanning data structures, web development, programming languages, and compilers.
- Formalized and described solutions to select Advent of Code problems using the Coq proof assistant.
- Created **14-part series** on compiler development, walking readers through lexing, parsing, compilation using LLVM, garbage collection, and polymorphic type checking.
